

Smart Refill Degasser

Smart Refill Degasser model YH-HP serial is designed for central heat supply and central air conditioning system to make them with the function of keeping the system constant pressure, complementing water automatically, draining automatically when expansion and vacuum degassing in one device.

Distinguishing features

Small dimension, the size of device is 1200(mm)×1100(mm)×1600(mm).

The device can operate when connected with power and water supply, which makes easy installation.

The operate parameters can be set freely to make the device suitable for any condition.

Simplify the system with the function of keeping the system constant pressure, complementing water automatically, draining automatically when expansion and vacuum degassing in one device.

Increased component life

Optimum heat transfer

Quiet operation

Eliminate the vapor lock of system.

Working time of the device can be adjusted freely within 7 days.

The maximum system volume is 150m³ for one set of device.

The device is with a preparation to complement water by dual-vertical pumps.

The volume of complemented water can be changed according to user's requirement.
